DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species A in the reply filed on 4/18/05 is acknowledged.
2. Claims 8-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 4/18/05.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the frame hingedly attached to the rear corner posts of claim 1; and the gears reducing the amount of force required to pivot the cargo bucket of claims 5 and 10 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an

Art Unit: 3612

application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Objections

5. Claim 1 is objected to because of the following informalities: on line 2, "the rear corner posts" should apparently be "rear corner posts". Appropriate correction is required.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gillet in view of Sloan.

Art Unit: 3612

Gillet (4,266,821) discloses a cargo bucket system comprising: a frame 22 hingedly attached indirectly to rear corner posts of a vehicle; a cargo bucket 28 pivotally attached to the frame; and a locking mechanism 20 for securing the frame in an upright position (Figure 1) to the rear corner posts.

Gillet lacks a handle for pivoting the cargo bucket.

Sloan (4,741,575) teaches a handle 36 for a cargo bucket.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided a handle as taught by Sloan upon the cargo bucket of Gillet in order to aid a user in movement of the cargo bucket.

With regard to claim 6, said frame is apparently adjustable along the width of the vehicle.

8. Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gillet, as modified, and applied to claim 1 above and further in view of Abreu.

With regard to claim 2, Gillet, as modified, further comprises: a pivot bolt 32 attaching said cargo bucket to said frame.

Gillet, as modified, lacks spacers between said frame and said cargo bucket including ball bearings.

Abreu (4,026,387) teaches spacers with ball bearings (Figure 4).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided spacers with ball bearings as taught by Abreau between the frame and cargo bucket of Gillet, as modified, in order to allow smooth pivoting of the cargo bucket.

Allowable Subject Matter

9. Claims 4-5, 7, and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
